PREFACE.

To the Chairman and Members of the Public Health and Housing Committee of the Essex County Council.

I have the honour to submit to you my Sixth Annual Report for the Administrative County for the year 1924. This is the 35th Report which has been issued and at the request of the Ministry of Health it is devoted, in the main, to summing up of the year's work for which the County Council is primarily responsible.

In the following Table, I present a comparative summary of the position in the Administrative County in respect to the Birth-rate, Death-rate and Infant Mortality:—

		1924.				1923.	
		and a set of		_		~_	
	Birth-	Death-	Infantile	Birt	h-	Death-	Infan
	rate.	rate.	Mortality.	rate	·.	rate.	Mortali
Essex	17,0	10.7	52.2	18.	6	9.8	4
England & Wales	18.8	12.2	75.0	19.	7	11.6	69

The rapid development, consolidation and maintenance of the Combined Medic Nursing and Clinical Services have placed a great strain on the central administrati staff throughout the year, resulting in the late issue of this report.

I desire, again, to record my high appreciation of the co-operation and coun of yourself and members of the Committee during my sixth year of office. My that are also due to my predecessor, Dr. John C. Thresh, who has continued to assist Honorary Consultant in County Public Health matters. I am also indebted to Medical Officers of Health and other officials of Local Sanitary Authorities for the co-operation, and to the medical, dental, nursing and clerical staffs for their loservices.

I am especially indebted to my Chief Assistant (Dr. T. P. Puddicombe) and my Chief Clerk and Sanitary Inspector (Mr. A. Marsh) for their loyalty and help.

W. A. BULLOUGH,

County Medical Officer

Public Health Department,
Duke Street,

CHELMSFORD.

26th October, 1925.

NATURAL AND SOCIAL CONDITIONS OF THE DISTRICT.

Population.

The population of the Administrative County at the Census in 1921 was 920,141, and no change in the boundaries of Sanitary Districts has occurred since that date. The Registrar-General has again furnished separate figures in connection with the estimated population for the year ended 31st December, 1924, namely:—

- (1) For calculating birth-rates, the figure which includes civilian and military population is ... 953,700
- (2) For calculating the death-rate, the figure which includes only civilian population is ... 948,800

A common population figure (estimated) was, however, furnished by the Registrar-General for every Sanitary District, with the exception of Colchester Borough, Harwich Borough, and Shoeburyness Urban District, each of which contains an appreciable non-civilian population.

The usual Summary, showing average number of persons per acre and acres per person, is set out below:—-

TABLE II.

			Population.				
	Area in Acres, 1921.	Census		nated on, 1924.	Persons Acres person,		
,		1921.	For Birth rate.	Fcr Death- rate.	(Calculated on Census figures).		
Municipal Boroughs (5)	26,516	89,672	94,012	89,912	3.3	0.29	
Urban Districts (25)	75,566	556,655	571,288	570,688	7:3	0.13	
Rural ,, (17)	862,361	273,814	288,400	288,200	0.3	3.15	
	964,443	920,141	953,700	948,800	0.9	1.05	

PHYSICAL FEATURES AND GENERAL CHARACTER OF THE DISTRICT.

Essex is one of the Metropolitan Shires, with about one-half of the whole population of the County centred in the south-western corner lying immediately adjacent to the Metropolis. The County in form is roughly a parallelogram measuring 48 miles from north to south and 63 miles from north-east to south-west.

In the County there are to be found populous urban areas, residential suburbs, wide agricultural districts, small manufacturing centres, residential seaside resorts, and a seafaring, fishing and dockside population.

Birth-rate.

The birth-rate for the Administrative County was 17.0 for 1924, as compared 118.58 for 1923; the rate for England and Wales for the year 1924 being 18.8.

Table XXIII. in Part IV. gives the following highest and lowest rates:-

Highest.			Low	est.	
*Tilbury U		26.4	Frinton U		10.3
*Romford R		25.4	Wanstead U.		11.7
*Barking U	• • •	22· 3	Halstead R		11.8
Shoeburyness U.	٠	21.4	Witham U		12.5
Harwich B.		20.7	*Burnham U.		13.1
*Grays U		19.2	Epping U	* *	13.1

Similar remarks in regard to those districts marked with an asterisk were made in the Report for 1923.

Death-rate.

The death-rate from all causes in the Administrative County for 1924 was 10, as against 12:2 for England and Wales and 9:8 for the County last year.

On page 71 Table XXIII. is given, showing the rates for the various Sanitar Districts from which the following highest and lowest rates are quoted:—

Highest.			Lowes	t.	
Bumpstead R.		19.3	Loughton U	* * •	6.6
Braintree U.		17:1	Tilbury U		8.0
Belchamp R.		16.5	Grays U		8.4
Saffron Walden B.		15.7	Frinton U		8.8
Wivenhoe U.		14.9	Orsett R		9.8
Witham U	• •	14.4			

In respect to the ages at death, the Stansted Rural District gives the followir interesting figures:—Out of a total of 83 deaths, 52 were over 65 years of age, 2 being between 70 and 80, 21 between 80 and 90, and one was over 90 years of age.

Transferable Deaths.

The Public Health Department again acted as the distributing channel for Transferable Deaths. During the year the Registrar-General supplied returns it respect of 2,243 inward transfers and 3,495 outward transfers, and these returns were forwarded to the various Medical Officers of Health. In several instances, exception were taken to the transfers, more particularly to the inward transfers, but after further enquiries in almost every case the deaths were accepted.

Infant Mortality.

The Infant Mortality rate for the Administrative County was 52°2 for the yer 1924, as compared to 45°8 for 1923, the average for the past ten years being 6. The rates for England and Wales for the past two years were 69 and 75 respectively

Table III. on page 11 sets out the comparative rates for each Sanitar District in regard to Births, Deaths and Infant Mortality.

NOTIFICATIONS OF INFECTIOUS DISEASE.

In Table XXV. of Part IV. is given a summary of notifications of Infectiou Diseases received in the various Sanitary Districts during the year.

ISOLATION HOSPITALS.

by the County Council to certain Hospital Boards in the County. The usual annual inspection of these hospitals (see Table IV, on page 12a) was made during the year and the full annual grant was allowed when improvements, recommended by the County Medical Officer at certain hospitals, had been carried out.

SMALL-POX.

No case of Small-pox occurred during the year under review, the Administrativ County having been free from this disease for four successive years. Cases have however, arisen in various parts of the country, and the usual notifications were received and circulated regarding persons entering the County who had been contact with cases occurring outside the County.

The London County Council have been good enough to continue the arrangement whereby the services of Dr. W. McConnell Wanklyn are loaned to any Medical Office of Health in the Administrative County of Essex on application to the County Medic Officer. During the year four such applications were received and six patient examined, and in each instance Dr. Wanklyn was satisfied that the patient was no suffering from Small-pox. Essex is fortunate in being able to call in such a experienced Consultant whose services have been much appreciated.

Dr. Wanklyn's services can be obtained at any time by telephoning to the Coun Medical Officer (Chelmsford 120) or in emergency telephoning direct to Dr. Wankly whose numbers are:—

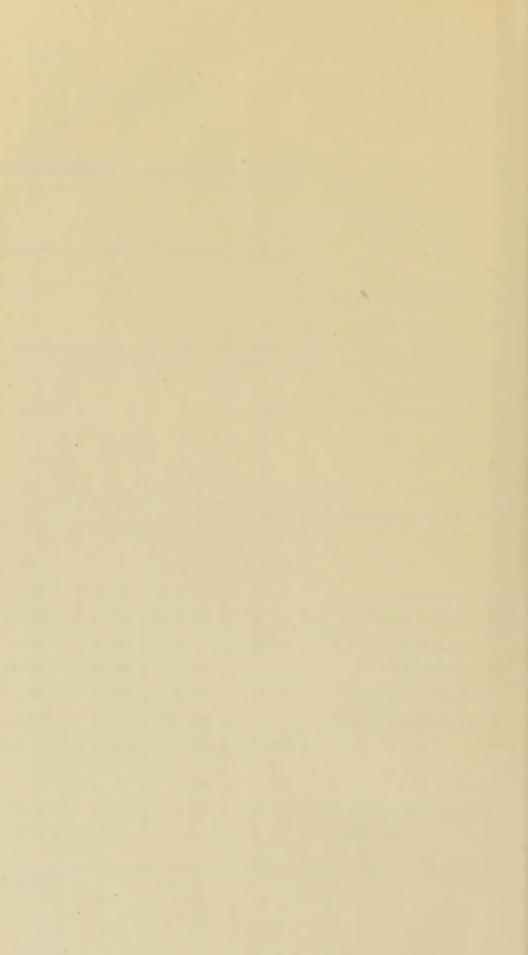

Office: Hop 5000. Private: Riverside 2678.

I regret to record that in three sanitary areas in the Administrative County satisfactory provision has been made for the isolation and treatment of cases Small-pox should any arise. Unless some arrangements are made, the Coun Council will have to consider what steps should be taken under Section 6 of t Isolation Hospitals Act, 1893.

LEPROSY.

The only Home for the care of persons suffering from Leprosy in the British Isle is situated in the Administrative County of Essex.

For many years the Company of St. Giles, Ltd. (1914) have provided at Bicknact out of voluntary funds the means of earing for these sufferers. There does not appear to be any need at the present time for public assistance in this splendid work, but such a need should arise, there ought to be no hesitation on the part of the Government or Local Sanitary Authorities in rendering all possible assistance.

Meanwhile, every praise is due to the Company of St. Giles, Ltd., for the excellent work which they are carrying out at this Home.

VENEREAL DISEASES.

For the year 1924-25, provision was made in the estimates for the diagnosis an treatment of Venereal Disease as follows:—

Hospitals and Laboratories	• • •	* * *		4,345
Drugs, &c				100
Propaganda				1.00
Salaries (proportion)		• • •	• • •	80
Contingencies	• • •		• • •	60
			-	
			4	£ 4 ,685

By letter, dated 2nd April, 1924, the Medical Officer of Health for the Londo County Council stated that the total cost of the London and Home Counties' schem for the year 1924-5 was limited to £124,050, of which the amount chargeable t Essex was estimated at £3.720, three fourths of which would rank for Government gran

The agreements in force with the Chelmsford and Colchester Hospitals wer renewed for the year 1924.

On page 13 Table V. shows the total number of Essex patients treated for the first time during the year. It will be seen that this number shows an increase of 19 over the previous year (1,169 compared with 975) but the aggregate attendances given a slightly lower rate per person as compared with the previous year.

EXAMINATION OF BACTERIOLOGICAL SPECIMENS

Particulars of the specimens examined during the year 1924 by the Count Bacteriologist, Dr. J. F. Beale, at 91, Queen Victoria Street, London, E.C. (Telephone: City 7116) are given in Table VI. on page 15. The total number was 9,952 or an increase of 2,347 over the previous year.

On 6th January, 1925, the County Council decided to extend the scope of th Laboratory facilities. Since that date the following revised list of the examination has been in operation, the additions being underlined:—

1. Blood:

- (i) Agglutination reaction for Bacillus Enteritidis, Bacillus Typhosu-Cholera, Dysentery (Shiga and Flexner's Bacilli), Paratyphoi A and B.
- (ii) Cultural Examination of Blood for organisms.
- (iii) Differential count of Blood Films.
- (iv) Examination of Blood Films for Malarial Parasites.

2. Cerebro-Spinal Fluid:

- (i) Chemical Analysis (Globulin Increase Test, Reduction of Fehling.
 Solution.
- (ii) Cultural Examination for Meningococci, Streptococci.
- (iii) Cytological Examination.
- (iv) Microscopical Examination for Meningococci, Streptococc and Tubercle Bacilli.

3. Faces:

- (i) Cultural Examination for Bacillus Dysenterae, Bacillus Typhosu Cholera, Paratyphoid A and B.
- (ii) Microscopical Examination.
- (iii) Microscopical Examination for Amæbae or other Intestin Parasites, Worms, etc., Tubercle Bacilli.

4. Food:

- (i) IN CASES OF SUSPECTED BACTERIAL POISONING: Examination for the bacteria usually associated therewith.
- (ii) ICE CREAM: Examinations as for Milk (No. 7).
- (iii) SHELL FISH: Examination for Sewage Pollution.

5. Gastric Contents:

Microscopical Examination of Vomit and Detection of Blood.

6. Hair and Skin:

Examination for Ringworm, Favus, Tinea Versicolor.

7. *Milk:

- (i) Cultural Examination for Bacillus Typhosus, Diphtheria Bacilli,
 Paratyphoid A and B
- (ii) Examination for Manurial Contamination.
- (iii) Microscopical Examination for Blood, Streptococci, Tubercle Bacilli, etc.

8. Pleural, Peretoneal and Ascitis Fluids:

- (i) Cultural Examination for Bacteria.
- (ii) Cytological Examination.
- (iii) Microscopical Examination for Tubercle Bacilli and other Bacteria.

9. Pus, etc.

- (i) Cultural Examination for Bacteria.
- (ii) Microscopical Examination for Tubercle Bacilli and other Bacteria.

10. Sputum:

- (i) General Microscopical Examination.
- (ii) Microscopical Examination for Actinomycosis, Bacillus Influenzæ, Hydatid Hooklets, Pneumococci Pyogenic Bacteria, Streptothrix, Tubercle Bacilli by sedimentation method, etc.

11. Swabs:

- (i) Cultural Examination for Diphtheria Bacilli, Meningococci, Ophthalmia Streptococci, etc.,
- (ii) Microscopical Examination for Vincent's Angina Bacilli.

12. Urine:

- (i) Chemical (a) Routine Analysis (Albumen, Examination of Deposit, Reaction, Specific Gravity, Sugar).
 - (b) Identification of Sugars.

- (c) Qualitative Test for Acetone, Bile Pigment, Di-acetone, Acid, Indican, Urobilin.
- (d) Quantitative Test for Albumen, Chlorides, Phosphet,
 Sugar, Urea, etc.
- (ii) Cultural Examination for Bacillus Coli, Bacillus Typho 3

Paratyphoid A and B.

- (iii) Microscopical Examination for Tubercle Bacilli.
 - *Examinations under the Milk and Dairies (Amendment) t. 1922, and the Sale of Food and Drugs Acts, 1875 to 11, are not included.
- N.B. Other bacteriological examinations, and examinations of samples of w will only be undertaken at the expense of the County Council to the special of the County Medical Officer. Any of these special samples sent without an order, will, however, be examined and charged to the Authority concerned

HOUSING.

Table VII. sets out particulars of the work carried out by Local San Authorities under the Housing Acts during the year 1923. Of the 3,885 house erected, 3,018 were built by private effort.

It will be observed that the Local Authorities found it necessary to serve notion the remedying of defects or the carrying out of repairs in 5,150 cases, or 281 116 than in the previous year.

SEWAGE WORKS AND RIVER POLLUTION.

In Table VIII. particulars are given of the various sewage works in the Adm trative County, showing that 65 visits were made in 1924, and 84 samples of efficient taken. The number of unsatisfactory samples of sewage effluent obtained representation of the number collected, and suitable communications regarding same addressed to the appropriate Surveyors.

METEOROLOGY.

The County Meteorological Station at Chelmsford has again kindly supplied data as set out in Table IX. on page 20. Reference to the last two columns shows the average number of vainy days per month was 15, the highest number being in amonth of May, and in only one month (March) were there less than nine rainy of

WATER SUPPLIES.

As intimated in last year's Annual Report, the County Council authorised the sum of not exceeding £250 in obtaining such expert assistance as may be necessare for the preparation and submission of a report on the position of the water supplied in the County.

Mr. J. Mackworth Wood, A.M.I.C.E., was engaged, and in the early part of 19: he earried out a detailed survey of the various sources of supplies in the County, which he was given every possible assistance by the Public Health Department. is understool that Mr. Wood's report has been presented and is now awaiting consideration by the Parliamentary Committee.

MENTAL DEFICIENCY ACT, 1913.

The County Education Committee and the County Committee for the Care of the Mentally Defective have again had the services of Dr. T. P. Puddicombe, Chief Assistant County Medical Officer, in examining and reporting on all cases of suspected nental deficiency. Dr. Puddicombe has also examined and given advice on any case of suspected mental defect referred to him, through the County Council, by the Justices.

The work of ascertainment and certification has continued throughout the year, although the orders of the Board of Control restricting the number of cases sent to Institutions are still in force.

185 cases were investigated and reported upon to the Committee for the Care of the Mentally Defective, being classed as follows:—

Feeble-minded		Mal 4		es. l'otals. 82
Imbeciles (Mongols 15)		3	4 37	71
Idiots	• • •	1	2 7	19
Dementia Præcox	• • •	• • •	1 —	1
Not classified under the Act			4 8	12
Totals		9	4 91	185
Totals		9	4 91	185

During the year 1924, 66 patients (45 males, 21 females) were placed in Institutions, bringing the total number of Essex cases provided for by the Committee in Institutions to 350 (178 males and 172 females). Three (1 male and 2 females) were placed under guardianship, making the number thus dealt with 9 (1 male and 8 females).

56 cases (29 males and 27 females) were placed under Statutory Supervision luring the year, bringing the number thus dealt with to 365 (190 males and 175 females).

The Essex Voluntary Association for Mental Welfare have continued to render valuable assistance in connection with cases needing supervision.

SALE OF FOOD AND DRUGS ACTS.

As in previous years, the supervision of the duties under these Acts was not undertaken by the County Medical Officer. Dr. Bernard J. Dyer, the County Analyst. receives samples direct from the Food and Drugs Inspectors, and he has kindly furnished the following particulars of the work done during the period 1st December, 1923, to 30th November, 1924. Included in the Table set out below are samples which have been submitted by the County Inspectors and Local Sanitary Authorities. Other Local Sanitary Authorities should avail themselves of the powers given in Section 13 of the Sale of Food and Drugs Act, 1875, under which they may

authorise the Medical Officer of Health or Sanitary Inspector to purchase samp at the cost of the Local Sanitary Authority, and submit same for examination the County Analyst. Much good work could undoubtedly be accomplished an extension of this supplementary inspectorial service.

During the year the services of the Food and Drugs Inspectors were agrequisitioned in connection with obtaining samples from milk vendors who supply County Sanatoria and also certain tuberculosis patients to whom extra nourishmed been granted by the County Council. By this means the County Medical Officatisfied bimself that the milk supplied was genuine.

'ARTICULARS RELATING TO SAMPLES REPORTED ON DURING THE WHOLE YEAR AS ADULTERATED OR UNSATISFACTORY.

Butter.

One sample purchased as butter consisted of margarine only. Two samples contained 20 per cent. of margarine. One sample contained 50 per cent. of margarine. One sample contained an excess of boracic preservative.

Condensed Milk.

Two samples taken "informally" in the early part of the year showed a teficiency in milk fat compared with the requirements of the regulations, but there was reason to believe that these were packed prior to the regulations coming into orce. Two other samples which were of satisfactory quality were not properly abelled in accordance with the regulations, the old labels having been used before he regulations came into force.

Gream.

Two samples of cream purchased as such contained small quantities of boracic preservative, the presence of which was not declared.

Gream Cheese.

The sample, purchased as "cream cheese," consisted not of real cream cheese ut of soft cheese made from skimmed milk.

Glaxo (Modified Dried Milk).

This sample complied with the regulations in composition, but was irregularly labelled—having been presumably labelled before the present regulations had come into effect.

Lard.

One sample of lard contained nearly three per cent. of water.

Milk.

Thirty-five samples contained ac'ded water in proportions varying from 2 to 34 per cent., while forty-eight samples were deficient in milk fat in quantities varying from 5 to 80 per cent. of the minimum quantity of fat proper to genuine milk. Two samples of milk, otherwise of satisfactory quality, afforded evidence of the presence of a little colouring matter.

Sponge Cake.

One sample contained a small quantity of boracic preservative.

Vinegar.

Two samples were deficient in strength to the extent respectively of 8 and 12½ per cent. of the minimum quantity of acetic acid proper to genuine vinegar.

MOSQUITOES.

Early in the year complaints were received regarding the prevalence of mosquitoes along the East Coast. With a view to securing combined action, a conference of the Local Authorities was held on 25th November, 1924, at which Colonel S. P. James, of the Ministry of Health, and representatives from the following Authorities were present:—

Essex County Council.
Frinton Urban District.
Walton-on-Naze Urban District.
Tendring Rural District.

Colonel James, on behalf of the Ministry of Health, pointed out that the Government could not find funds for providing the machinery to combat the nuisance, but the Ministry were prepared to give advice and assistance by means of their Medical Officers and Laboratories. He mentioned that similar assistance had been rendered at Hayling Island where they had been successful in overcoming the nuisance. In his opinion, the first work to undertake was really an engineering one, namely, to get rid of the stagnant water in the excavations behind the sea wall.

A further visit to Frinton was made by Colonel James on 12th December, 1924, when he came to the conclusion that the three chief problems were:—

- (1) The ditches or dykes on and surrounding the golf course.
- (2) The large excavations on the land side of the sea wall.
- (3) The extensive marshy grass land at Walton.

Colonel James recommended that an expert drainage engineer should be called in to prepare a scheme for dealing satisfactorily with the existing superfluous water.

Unfortunately, it was not possible to secure a comprehensive campaign by united action on the part of the three Local Sanitary Authorities concerned, but according to the Annual Report for 1924, of the Medical Officer of Health (Dr. E. Craigie Bell), the Frinton Urban Council took the following steps:—

- "Various schemes were discussed by your Council and it was decided to get permission to fill up the pond near the Cricket Ground with material to be obtained from the debris from Oxford and Eaton Roads, and treat the ditches running through their district.
- "It had been stated that mosquitoes would not breed in sea water; it was therefore decided to see if the ponds containing brackish water that extended some 14 miles along the sea wall could not be pumped dry, and then water from the sea pumped in to take its place. It was also hoped that a number of small sea animals, who are known to devour the mosquito eggs and larvæ, would be pumped in with this.
- "The only permanent cure was known to be the filling up of these ponds, some of which are several feet deep, and the spraying was an attempt to improve matters whilst the latter was being done.
- "The filling up is a big job. The Surveyor estimated that to fill up the ponds to a depth of only one foot would take at least 125,000 yards of material and, even if possible, would take years to accomplish.
- "A pump was hired and one of the ponds easily pumped dry, but it had re-filled to the extent of 11 inches in 24 hours with brackish water that had apparently percolated into it from the surrounding ponds and marshes.
- "The matter is so serious a one for the wellbeing of Frinton as a health resort that other measures will have to be thought out and experimented with and will, I think, eventually prove successful."

The following further report in a letter, dated 14th September, 1925, from Dr. Craigie Bell, is of interest:—

- "I think the mosquito season is now over and you may be pleased to hear our experience.
- "As I wrote you we tried drainage, but the Council thought this expense would be too great. The Surveyor and myself then considered

local poisoning of the ponds under the sea wall from which Ochlerotatus detritus arrived, and decided that as the water was salt and therefore animals were unlikely to drink therefrom we would try Lowe's disinfectant and corrosive sublimate in alternate ponds, as even if dogs or cattle did occasionally drink, the dose would be a medicinal one and help rather than poison them

"About the second week in May we had a few mosquitoes. On enquiry I found that some of the ponds farthest away from Frinton had not been treated. This was done, and from that time mosquitoes have been a rarity in the town.

"In the twenty-five years that I have been in Frinton I can safely say I have never seen so few mosquitoes. I have only treated four people for bites and those very harmless, and the chemist tells me he has sold very few bottles of mosquito lotion

"This effect may have been caused by the dry season. . . . The ponds have never dried up but always had some feet of water in them, the weather was warm and suitable for breeding. Frequent examinations have been made for larvæ but none have been found. The only mosquitoes I have seen have been the Culex pipiens and one or two Theobaldia annulata.

"I shall, next year, again try Hydray Perchlorid, and I think that so far as the detritus is concerned we shall get the same result."

Frinton are fortunate in possessing such active officers as their Medical Officer of Health and Sanitary Inspector, to whom great credit is due for the success achieved during the past summer. It is hoped that the neighbouring Authorities will make similar endeavours.

OFFENSIVE SMELLS.

SHELL HAVEN AND THAMES HAVEN. In the Annual Report for 1923, full details were given as to the action taken in respect to this nuisance. It is satisfactory to report that no further complaints were received during the year 1924.

CRSETT RURAL DISTRICT. Towards the end of the year complaints were received of a nuisance caused by a tar boiling works at Purfleet. On 17th November, 1924, Councillors E. N. Buxton and F. D. Smith, and the County Medical Officer visited the district at the request of the Local Medical Officer of Health, and found that the smell complained of was given off during the process of boiling tar in the manufacture of "Liquiphalt." Further investigations proved that the complaints were justified, many of the residents in the vicinity having suffered from nauseating sickness. The Rural Council have decided to institute legal proceedings as the attempts to secure an abatement of the nuisance by friendly co-operation have failed.

This is another instance of the rapid industrialisation of the northern bank of the Thames, proving the need for a definite town planning scheme for the whole area. Attention was drawn to this in the last Annual Report, and it is pleasing to note that the Essex Joint Town Planning Committee appointed in October, 1922, have enlisted the co-operation of the Surveyors of the various Councils in the preparation of such a scheme.

ANTI-RABIC TREATMENT.

By Circular 523, dated 30th October, 1924, the Ministry of Health cancelled the arrangements made in 1919, whereby a person who had been bitten by a dog suspected of being rabid could receive treatment free of charge at the Department of Pathology, St. Thomas' Hospital, Westminster Bridge.

Arrangements for Anti-Rabic Treatment may be made with Professor Dudgeon, Department of Pathology, St. Thomas' Hospital, Westminster Bridge. In cases where the Medical Officer of Health is satisfied that the patient cannot pay for the treatment or stay in London at his own expense, the Local Authority may undertake financial responsibility.

"GRADE A" MILK

The arrangements outlined in the last Annual Report for providing licences to produce and sell "Grade A" Milk were continued. In view of the increasing number of applications for licences to supply this quality of milk, it is deemed advisable to give below the Statutory and Non-statutory Conditions which apply thereto:—

Statutory Conditions.

Conditions subject to which Licences for Selling Milk as "Grade A" may be Granted:

A.—The following conditions apply to producers only:—

- (1) No animal which to the knowledge of the owner of the herd has at any time been tested with tuberculin and has re-acted to the test shall form part of or be added to the herd.
- (2) The producer shall cause every milch cow belonging to the herd to be examined once in every three months and shall produce to the ticensing authority the veterinary surgeon's certificate within seven days after the date of the certificate.
- (3) Where any animal is certified as showing evidence of any disease which is likely to affect the milk injuriously, it shall be isolated or removed from the herd, as the case may require. The milk from an animal so isolated shall not be sold as milk from the herd. The producer shall inform the licensing authority of the reasons for the isolation or removal of an animal and, in the case of removal, of the manner in which it has been disposed of.
- (4) If at any time it is shewn to the satisfaction of the licensing authority that tubercle bacillus is contained in the milk the producer shall take all necessary steps to ascertain which animals are diseased and to remove them from the herd, and shall inform the licensing authority how such animals have been disposed of.

- (5) A suitable system shall be adopted for the marking for the purposes of identification of the milch cows belonging to the herd, and a complete register of such cows shall be kept.
- (6) The cows in milk belonging to the herd shall be kept separate from all other cows in milk.
- (7) Except where the milk is bottled by the producer in accordance with the procedure for bottling hereinafter specified, the milk shall be consigned from the dairy where it is produced in an unventilated sealed container, which shall be labelled or marked in a suitable manner with the address of the dairy, the day of production (with the word "morning" or "evening" according to the time of milking) and the words "Grade A Milk."
- B.- The following conditions apply to persons other than producers:-
 - (1) Except where the milk is delivered to the consumer in the containers in which it is received, the seals being unbroken, it shall be delivered either in bottles or in other suitable containers of not less capacity than two gallons.
 - (2) Every bottle containing the milk shall be closed with a suitable tightly fitting disc and covered with a suitable outer cap overlapping the lip of the bottle and so fastened as to form a complete seal. The cap shall bear the name of the dealer by whom the milk was bottled and the address of the licensed bottling establishment, the words "Grade A Milk" and the day of production, and shall, except with the consent of the licensing authority, bear no other words. Where containers other than bottles are used every container shall be closed with a tightly fitting cover and shall be suitably sealed and labelled.
- C.—The following conditions apply to all holders of licences to sell milk as "Grade A":—
 - (1) The milk shall not at any stage be treated by heat unless a licence to sell such milk as "Pasteurised" has been granted under this Order, and where such a licence has been granted the term "Pasteurised" shall be added after the designation "Grade A Milk" wherever such designation is used in connection with the sale of such milk or the labelling or marking of receptacles containing such milk.
 - (2) Milk sold as "Grade A Milk" shall be produced and treated under such conditions that on a sample being taken at any time before delivery to the consumer the milk shall be found to contain—
 - (a) Not more than 200,000 bacteria per cubic centimetre, and
 - (b) No coliform bacillus in one-hundredth of a cubic centimetre.
 - (3) Milk sold as "Grade A Milk Pasteurised" shall be produced and treated under such conditions that on a sample being taken before delivery to the consumer the milk shall be found to contain in the case of a sample taken at any time after the year 1923 not more than 30,000 bacteria per cubic centimetre, and no coliform bacillus in one-tenth of a cubic centimetre.

County Council's Conditions (not statutory). These are not compulsory, but experience confirms the view that they are needful:

- (1) Cowsheds and dairy must be sanitary, clean, well lighted and ventilated, and have water laid on or easily accessible. Floors should be of impervious material and swilled down prior to each milking.
- (2) Surroundings of cowsheds must be kept as clean as possible and all manure stored at a good distance from the cowsheds and dairy.
- (3) Dust must not be created immediately prior to and during milking times.
- (4) Milking stool must be kept clean; the type with a handle projecting from seat is preferable.
- (5) Milkers must be clean in habits, wear clean linen overalls and cap, and wash their hands before milking each cow, for which purpose a properly trapped wash-basin with water supply, soap, nail brush and roller towel should be provided in a conspicuous position.
- (6) Cows must be healthy, carefully groomed, and all udders and teats washed and wiped with clean, damp cloths before each milking. Such cloths must be washed and sterilised after each milking. Tails and udders should be clipped when necessary.
- (7) Milk pails must be of the semi-covered type. Special pails can be obtained for cows with low udders.
- (8) First stream of milk from each teat should be rejected, and the practice of dry-handed milking should be adopted.
- (9) Milk should be conveyed to dairy as promptly as possible in semi-covered or covered pails and then strained with cotton wool discs and cooled to 50°F. or as low a temperature as possible, and kept cool in closed vessels during storage and transit.
- (10) Milk utensils, including cooler, must be rinsed with cold water immediately after use, then thoroughly washed with hot water and sods, rinsed in clean water and sterilised by steam.
 - (11) Water supply must be pure and wholesome.

At the end of 1924 eleven farms had been licensed as against nine for last year. These farms have been revisited at intervals throughout the year, and the following table summarises the results of the examination of the samples taken. It will be seen that in only one instance (No. 11) did a sample fall below the standard, and at a subsequent visit to this farm in 1925 the next sample was satisfactory:—

							SAMPLES.

Application for licences from 13 other farms received attention and there were three applications pending from the previous year. All these did not reach the required standard before the end of the year. From the following table it will be seen that the unsatisfactory samples came from farms No. 1, 3, 4, 5, 11, where the buildings or methods were below standard:—

The County Sanitary Inspector reports: -

"The outstanding feature of the year was an increasing number of applications for licences to produce "Grade A" Milk as well as a growing demand for my services for advice upon reconstruction of buildings, methods of production, &c.

"Essex may congratulate itself upon possessing a progressive body of farmers who are realising that to produce other than clean milk is a relic of the past During the last few years the whole outlook has changed, very largely as the result of the training received by farmers and their sons from the splendid courses o lectures provided at the East Anglian Institute of Agriculture. At one farm, in particular, the return of the farmer's son from the Course at the Institute revolutionised the whole system of milk production, and what is more important maintained a low bacteria count.

"When requested, the bacteriologists at the Institute have undertaken special investigations at the farms, and in this way have been of great assistance to those farmers who had difficulty in obtaining a bacteria count of the "Grade A" standard,"

"All these are steps in the right direction, namely, aiming at the perfecting of methods of production at the farms. Having procured a pure, clean milk, it will be for the conveyer, retailer and housewife to protect it from the dangers of pollution which exist between the source and the consumer."

COMBINED MEDICAL SERVICE.

The Scheme of Combined Medical Service as shown in the table included in the Annual Report for the year 1922 has been continued during 1924.

The Scheme may now be considered as having passed out of the experimental stage into a permanent arm of the public health service. The Ministry of Health have been of considerable assistance in recent months in advising Local Sanitary. Authorities where vacancies had occurred to consider the question of appointing as their Medical Officer of Health a medical man with other public appointments such as Assistant Medical Officer to the County Council whose services might be secured by an arrangement with the County Council.

At the time of writing the Combined Medical Service Scheme is in operation in the districts shown in Table X. on page 33.

., Females	2	11	7	8	2	3	3	2	2	1	_	41	14

On the 24th January, 1925, the Ministry of Health asked for the usual annual return of the above notifications, and also for a supplemental return showing new cases of Tuberculosis coming to the knowledge of the County Medical Officer during the period from the 30th December, 1923, to 3rd January, 1925, otherwise than by notification on Form A or B under the Public Health (Tuberculosis) Regulations, 1912. This special return is repeated in Table XII, the last column of which shows the figures for the previous year. It will be observed that the numbers for 1924 are greatly in excess of the figures for 1923. Much of this increase is due to the perfecting of the administrative machinery, but on the other hand it does appear that in some parts of the County there is an increase in the tendency of non-notifications. Reasons for this are well known, e.g., some patients specially ask doctors not to notify, as they are afraid of the consequences in regard to employment, lodging, &c., whilst others refrain from calling in medical advice until the last moment.

In this connection the following views of the District Tuberculosis Officers are of interest:—

Dr. W. F. Corfield (Colchester).

"Many eases are not notified as early as I should like, but not many notifications are received after death. It is probable that many eases delay going to see their doctor until the disease is past the early stage."

Dr. S. R. Riehardson (Saffron Walden).

"It seems to me that there has been a marked improvement in the early discovery and notification of tuberculous patients. Local medical men send many doubtful eases to the Dispensary, or ask for consultations. No notifications have been received after death, and cases discovered in an advanced stage have almost invariably been imported from other parts of the country."

Dr. J. Ramsbottom (Tendring).

"There does not appear to have been any undue delay in notifying this "year, and there has been an appreciable improvement during the past "three years."

Dr. J. Ranson (Halstead).

"I have during the year received notifications promptly from practitioners in my district. In only one case did I have to request a ease to be notified whose sputum had been found to be positive at the County Laboratory. I am unaware of any case that remains unnotified."

Dr. W. B. Wood (Grays).

"Most cases are being notified at an early stage of the disease, and most of the doctors of the district make a habit of referring to me any eases about which they have any doubt. When cases are notified at a late stage of the disease, it is generally because the patient has been deliberately concealing his complaint. One case occurs to my mind in which notification had apparently been neglected."

Dr. W. A. Milne (Clacton).

"Speaking generally, it is the exception to get Tuberculosis notified in an early stage. There are several reasons for this, perhaps the most important being that a great many of the eases are imported from other districts and have already been under treatment elsewhere. There is also the case that does not consult a doctor until physical signs are pronounced, and occasionally one comes across one which has been missed; but it is some time now since I have had a notification after death. Another reason frequently given is that there was an impression that a particular ease had already been notified—presumably by another practitioner.

"Taking everything into consideration, I think there has been an "improvement in recent years, and with a view to still further efficiency, I have recently sent a circular letter to practitioners reminding them of

"their obligations under the Regulations, and containing an extract from paragraph 5 of the Ministry of Health's Circular 549. The receipt by the Tuberculosis Officer of the result of sputum examinations is also a great help."

Dr. W. H. Alderton (Lexden & Winstree).

"On enquiry it is usually found that a tuberculosis case which has died has only recently come under treatment of the practitioner concerned, and he has taken it for granted, usually on account of the duration of the case, that notification has taken place elsewhere. If other districts made the practice of Essex and reported cases transferred to other districts, it is probable that a fair percentage of cases now labelled unnotified would be eliminated. . . It is probable that a circular letter to practitioners, asking them to notify all cases coming under their care for the first time, would also reduce the number labelled unnotified."

Dr. G. N. Meachen (Rochford).

"Medical practitioners in my area are fully alive to the necessity for early diagnosis in tuberculous cases and are not slow to take advantage of the consultative facilities provided at the dispensary or in patients' own homes. There does not appear to be any delay as regards notification."

Dr. A. H. Jacob (Romford).

"It is quite exceptional, in my experience, to receive notification of "Pulmonary Tuberculosis at such a time as to enable the utmost benefit to be derived by the patient from treatment.

"The arrival in the district, however, in the last three years, of the younger generation of practitioner has certainly brought many more cases with positive sputum results for examination as 'suspects.' Following the recent Order of the Ministry of Health (Circular 549), however, I look forward to a great speeding up of notification.

"I believe that the only possible action to secure earlier notification has already been taken in the above Circular."

Dr. C. R. Brown (Epping).

"These notifications are, as a rule, late. I do not know of any instances of notification after death in this area.

"Cases are not sent to the Tuberculosis Officer for diagnosis early "enough."

Deaths.

Table XIII. gives the number of deaths at all ages from pulmonary and non-pulmonary Tuberculosis in the Administrative County of Essex as compared to England and Wales, since the inception of sanatorium benefit in 1911.

Dispensaries and Visiting Stations.

At the conclusion of 1924, the Dispensaries and Visiting Stations enumerated below were open and under the charge of the Tuberculosis Officers named :-

> BARKING Tuberculosis Officer, Kerr Simpson, M.D., D.P.H. Dispensary, 37, Linton Road, Mondays, 3 to 5 p.m., Thursdays, 10.30 a.m. to 11.30 p.m.

> BRAINTREE Tuberculosis Officer, P. J. Gaffikin, M.C., M.D., B.Ch., B.A.O., D.P.H. Dispensary, Co-operative Buildings, Wednesdays, 11.30 a.m. to 1 p.m. Sanatorium, Black Notley.

> CHELMSFORD Tuberculosis Officer, M. Barker, M.R.C.S., L.R.C.P., D.P.H. Dispensary, General Hospital, London Road,

Fridays, 2 to 4 p.m

Sanatorium, Harold Court.

Tuberculosis Officer, W. A. Milne, M.B., Ch.B., CLACTON D.P.H.

> Dispensary, Skelmersdale Road. Fridays, 11 a.m. to 12 noon.

Tuberculosis Officer, W. F. Corfield, M.D., D.P.H. COLCHESTER Dispensary, 12, Trinity Street, Tuesdays, 10.30 a.m. to 12.30 pm. Thursdays, 10.30 a.m. to 12.30 p.m.

Sanatorium, Colchester.

Patients from the Wivenhoe Urban District and Lexden and Winstree Rural District are seen during the same sessions by the Puberculosis Officer for those districts, W. H. Alderton, M.C., M. R.C.S., L.R.C.P., D.P.H.

Tuberculosis Officer, P. J. Gaffikin, M.C., M.D., B.Ch., B.A.O., D.P.H.

> Dispensary, 18, Mount Pleasant Terrace, The Cruseway, Tuesdays 1st and 3rd in each month, 10.30 to 11.30 a.m.

Tuberculosis Officer, Charlotte Brown, L.R.C.P., Epping ... L.R.C.S.

> Dispensary, High Street, Wednesdays, 2nd and 4th in each month, 10.30 to 11.30 a.m.

Sanatoria, Chingford and High Beech.

DUNMOW

GRAYS ...

. Tuberculosis Officer, W. B. Wood, M.A., M.D., B.Ch., M.R.C.P., D.P.H. Dispersary, Hilldrop House, 59, London Road,

Dispersary, Hilldrop House, 59, London Road, Grays. Mondays, 4 to 6 p.m., Thursdays, 4 to 6 p.m.

HALSTEAD

Tuberculosis Officer, J. S. Ranson, M.R.C.S., L.R.C.P., D.P.H.

Dispensary. Out-patients Dept., Cottage Hospital, Wednesdays, 2nd and 4th in each month, 11.30 a.m. to 1.30 p.m.

Sanatorium, Sible Hedingham.

HARWICH

... Tuberculosis Officer, J. Ramsbottom, M.B., Ch.B., D.P.H.

Dispensary, c/o Mr. Woodward, Corner Chemist, 1, Church Street. Tuesdays, 11 a.m. to 12 noon.

ILFORD ...

. Tuberculosis Officer, A. H. Jacob, L.R.C.P., L.R.C.S.

Dispensary, 38, Oakfield Road. Tuesdays, 3 to 5 p.m., Fridays, 4 to 6 p.m.
Sanatorium, Ilford.

LEYTON

.. Tuberculosis Officers, J Sorley, M.A., M.D., D.P.H., LL.B., and Charlotte Brown, L.R.C.P., L.R.C.S.

Dispensary, 180, High Road, Mondays, 2 to 4 p.m. (children only), Thursdays, 10 a.m. to 12 noon (new cases only), and 6 to 8 p.m., Fridays, 2 to 4 p.m.

MALDON ...

... Tuberculosis Officer, W. H. Alderton, M.C., M.R.C.S., L.R.C.P., D.P.H.

Dispensary, 114, High Street, Tuesdays, 2nd and 4th in each month, 10.30 a.m. to 11.30 a.m.

ROMFORD

... Tuberculosis Officer, A. H. Jacob, L.R.C.P., L.R.C.S.

Dispensary, 29, Eastern Road, Tuesdays and Fridays, 9.30 a.m. to 12.30 p.m.

SAFFRON WALDEN

Tuberculosis Officer, S. R. Richardson, B.A., M.D., B.Ch., B.A.O., D.P.H.

Dispensary, Adult School Room, High Street, Tuesdays, 1st and 3rd in each month, 2 p.m. to 4 p.m.

SOUTHEND

Tuberculosis Officer, G. N. Meachen, M.D., E Dispensary, 30, Clarence Street, Mondays, Thudays and Saturdays, 2.30 to 4.30 p.m. (men, 2 women 3.15), Tuesdays, 5.30 to 8.30 p.m. (monly), Fridays, 6.30 to 8.30 p.m. (women only).

WALTHAMSTOW

Tubereulosis Officer. J. Sorley, M.A., M.D., D.P.1 LL.B.

Dispensary, 334, Hoe Street, Mondays, 2 to 4 p.1 Tuesdays, 10 a.m. to 12 noon and 6 to 8 p.1 Wednesdays, 10 to 12 noon (new cases onl Fridays, 10 to 12 noon (children only).

The County Scheme for the Treatment of Tuberculosis, as revised in November 1921, has been continued and the reports from some of the District Tuberculos Officers reveal the increasing usefulness of the Dispensaries throughout the Count A selection of these reports is given below:—

- Dr. W. F. Corfield (Colehester) states that "the Dispensary in this area "undoubtedly of great use to both the doctors and their patients. My opinion "eonstantly being sought about cases sent to the Dispensary, and not only f "diagnosis, but also as to the fitness of patients for sanatoria."
- Dr. S. R. Richardson (Saffron Walden) writes: "I consider the Dispensary: "essential part of any satisfactory Tuberculosis Scheme, and the best possible mean of keeping in touch with patients."
- Dr. J. Ramsbottom (Tendring and Harwich) points out that there is only the one Dispensary to serve the Tendring District, and that is situated at the extremedge, i.e., Harwich. It therefore only serves Harwich and Parkeston (Ramsey), population of about 15,000, of which the Borough represents 13,000. Dr. Ramsbotto says: "As a consulting centre for Harwich and Parkeston, I am satisfied with it, ar "as such the practitioners in this district use it freely. I hope to commence "consulting centre at Weeley during the coming year when the office is completed."
- Dr. W. B. Wood (Orsett) writes: "I think that the Grays Dispensary continue" to serve a very useful function in this district. I am indebted to the Tuberculos "Sub-Committee for granting me permission to adopt a number of minor improv" ments in decoration, etc., during the year, as the result of which somewhat ding "quarters have been considerably brightened. The installation of a first class X-ra" plant at the Tilbury branch of the Dreadnought Hospital is likely to prove of gree assistance. The chest radiograms, which have been taken at this Hospital, have been of excellent quality."
- Dr. W. H. Alderton (Lexden & Winstree and Maldon) states that "the Tuber" culosis Dispensaries continue to function usefully; this is especially so in the "Maldon District, where the majority of the patients are fit to attend. In Lexden.
- "Winstree, however, the patients can be divided into two classes; those unable t

buttend and those fit for work, and this combined with the fact that the travelling exercices are poor to and from the country districts, accounts for there being more visiting necessary than would otherwise be the case."

Dr. A. H. Jacob (Romford and Ilford) writes: "I consider the function of the Dispensary, as a clearing house and for close observation of suspects, is amply willfilled, and without the Dispensary the campaign for the prevention of Tuberculosis would be much set back.

"The linking up of the Dispensary with the inspection of the school child and with the Care Associations is, I think, in every way desirable."

anatorium Treatment.

(1) BEDS. Table XIX. shews the number of beds occupied and the number of tients treated during the years 1923 and 1924.

Artificial Pneumo-Thorax Treatment. The arrangements with the Victoria Park Iospital, London, have been continued during the year. Only four out of ten cases into this Institution during the year were considered suitable for artificial pneumotorax treatment.

(2) COUNTY COUNCIL INSTITUTIONS. The County Accountant has again kindly applied Table XX. (page 50), which gives particulars regarding the average cost or patient per week at each of the four Institutions controlled by the County Council.

- (a) Harold Court Sanatorium. During the year the number of beds availab at this Institution was increased to 56, as compared with 53 for the previous year Treatment was given during the year to 260 patients, the average length of stay bein 78 days. Dr. T. P. Puddicombe, Chief Assistant County Medical Officer, continue the duties of temporary Medical Superintendent until August, 1924, when Dr. Malcoli Barker was appointed.
- (b) Black Notley Sanatorium. The accommodation at this Institution remain at 45 beds. During the year 218 patients received treatment, the average length a stay of each patient being 74 days.

At the time of writing, the plans of proposed extensions at this Institution are in the hands of the Ministry of Health. These extensions aim at providing the following accommodation:—

50 beds for women suffering from pulmonary tuberculosis.

50	11	children	11	11	2.1
50	22	27	33	surgical	,,
150	٠				

- (c) Sible Hedingham Sanatorium. There is no outstanding feature to report in connection with this Institution. 107 children were treated during the year, the average length of stay being 105 days. The number of beds provided was 31.
- (d) High Beech Hospital for Surgical Tuberculosis. The 32 beds provided a this Hospital were kept full throughout the year. Sir Henry J. Gauvain, Consulting Surgeon to the Essex County Council, continued his monthly visits to the Institution. There were 39 children treated during the year, the average length of stay being 290 days.
- (e) [General. In regard to sanatorium treatment generally, the following observations made by some of the Tuberculosis Officers are of interest:—

Dr. W. F. Corfield (Colchester).

"In my opinion, only what may be termed early intermediate cases "should be admitted to sanatoria."

Dr. Corfield also makes suggestions as follows:-

- "(a) Hospital accommodation for advanced cases.
- "(b) A proper understanding in the sanatoria that cases that can be relieved are to be kept until that relief is obtained.
- "(c) Tuberculosis Officers to be instructed not to send advanced, and certainly not dying, cases to sanatoria."

Dr. S. R. Richardson (Saffron Walden).

"In my opinion it is not advisable to reserve sanatoria for early and "doubtful cases, until there is adequate institutional accommodation for "intermediate and advanced cases. I regard the isolation of the more "infective cases as an infinitely more important factor in checking the spread "of Tuberculosis than the admission of early and doubtful cases to sanatoria."

Dr. J. Ramsbottom (Tendring).

"Approaching 70 per cent. of the cases in my area are clinically "advanced cases, and during the year I have only seen two or three "undoubtedly early cases. . . It appears to me that all cases, whether "early intermediate or advanced, should be admitted to sanatorium, provided "the case shows reasonable grounds to expect improvement.

" For the short time the patients can be treated in sanatorium, the "chronic, intermediate and advanced cases with a good resistance to the "disease already developed, and who are suffering from a temporary break-"down, often do quite well with a short period of treatment, and on "leaving are able to return to work.

"The difficulty arises with the obviously hopeless cases. With these sanatorium treatment is too severe for them, and to associate them with improving cases in sanatorium is detrimental to the latter. Yet in the interest of preventive medicine some means of isolation of these highly infectious cases are essential."

Dr. J. S. Ranson (Halstead).

"Intermediate and advanced cases should be, when first discovered, admitted to a sanatorium for the purpose of education as to the manner of conducting their future lives. More accommodation is required for advanced cases."

Dr. W. B. Wood (Grays and Tilbury).

Speaking of intermediate and advanced cases, Dr. Wood states that "the problem in dealing with these seems almost impossible of solution." That they should be segregated as virulent sources of infection, especially "to the young, will be admitted by all who have studied the problem. If "such cases, however, are sent to sanatoria where earlier cases are received, "they must exercise a most depressing and consequently deleterious effect.

"On the other hand, if the advanced cases are collected together at the same institution, the place inevitably tends to become a home for the dying. . .

"I think, therefore, that the best course is that which has actually been taken, namely, to admit early cases to a sanatorium like that a "Colchester and intermediate cases to Harold Court. Advanced cases should be sent to the local infirmary whenever it is possible to induce them to go."

Dr. W. H. Alderton (Lexden & Winstree).

"At the outset one may say that advanced hopeless cases should not be admitted to sanatoria; one may also say that there are early cases also that should not be admitted to sanatoria.

"I think we are too dogmatic when we say that early cases should have sanatorium treatment and advanced cases should not. Speaking of purely pulmonary cases, those who require an ambulance to convey them to the sanatorium are not the cases suitable for such treatment. To reap the full benefit of a sanatorium a patient should at least be able to take gentle exercise each day, with a view to increasing the resistance by auto-inoculation. Patients who are bed cases are better off in their own homes, if suitable, or in hospital. As Dr. Milne pointed out last year, one is always subject to pressure to get cases, which are really unsuitable, into sanatoria, and it is difficult to resist this when home conditions are unsuitable for treatment at home. Until we have better housing conditions, ample accommodation for both hospital cases and sanatorium cases, we shall continue to have the controversy with regard to the type of case which should be admitted to sanatorium."

Dr. G. N. Meachen (Rochford).

"In my opinion there is a distinct need for further institutional "accommodation for the advanced case, not in any 'home for the dying,' 'hut in a special hospital where the idea of recovery is fostered to the last."

Conferences of Tuberculosis Officers. A Conference of Tuberculosis Officers was held on the 10th December, 1924, when a report by a Special Sub-Committee of Tuberculosis Officers, namely, Drs. T. P. Puddicombe, J. Sorley, W. F. Corfield and P. J. Gaffikin was considered. This Special Sub-Committee had been appointed at a previous conference of Tuberculosis Officers to consider and report upon several matters, the most important being the provision of institutional treatment and the forms used in connection with the completing of "Dossiers." The conference proved exceedingly helpful, particularly in obtaining the views of the Tuberculosis Officers on the provisions which have been made in the County for institutional treatment, and a number of useful amendments were made to several forms of report.

Railway Vouchers.

The arrangement with the Railway Companies in Essex under which Railway Vouchers are issued direct from the Public Health Department to necessitous patients, has continued to work successfully. During the year 568 vouchers were issued, the total railway fares amounting to £138 16s.

Extra Nourishment.

Grants of extra nourishment have been made during the year to those patients coming under the categories outlined in the report for 1923. The following Table shows the amounts expended since 1921, as compared with estimated expenditure:—

Year.		E	Estimated xpenditure.		Expe	etual nditi s.	ire.
1921-22		• • •	1,100		890	16	11
1922-23	•••	• • •	355	• • •	270	18	5
1923-24	* * *	• • •	30 0		109	16	11
1924-25			300		139	8	7
1925-26		• • •	300	• • •		?	

Each order is issued on the understanding that "Grade A" milk will be obtained if it is procurable in the district.

Dental Treatment.

The County Council's Scheme, outlined in the Annual Report for 1919, has been continued. 83 patients were treated, having 256 extractions, 51 fillings and 22 scalings.

Contributions.

As stated in the Annual Report for 1921, contributions are asked for not only from parents of children who receive institutional treatment, but also from adult patients (ex-service men excluded). The total amount so collected during the year was £1,916 18s. 11d. The services of School Attendance Officers were again utilised for the collection of these contributions. Careful enquiry is made from time to time, and it does not appear that these contributions are restrictive in character. I have not heard of a single patient who has been prevented thereby from receiving the necessary treatment.

After-Care.

The objects and conditions of Tuberculosis Care Associations outlined in last year's Annual Report operated as and from 1st April, 1924.

Table XXI. gives a list of the Care Associations throughout the County and shews the extent to which they have rendered assistance to patients. Cases needing assistance are referred to the Tuberculosis Officer for the district who acts as medical adviser to the Association.

			£.	 1 0 .240		£9,878	
			20.				

As indicated in last year's Annual Report proposals were made towards the end of the year 1923 for developing and extending the Maternity and Child Welfare Scheme. These were approved by the Public Health and Housing Committee and during the year 1924 were dealt with as indicated under the various sections outlined in the following pages.

(3) MEDICAL SERVICE. A full list of the County Medical Staff is given on page 7 and of these 11 devote part of their time to Child Welfare work by attending Centres. giving "Talks" to parents, visiting midwives, etc. The principle of Combined Medical Service has been followed.

The appointment of an additional whole-time medical officer for Child Welfare purposes did not materialise during the year under review but at the beginning of the year 1925 two new appointments were made on the County Medical Staff, the officers appointed undertaking the various public health duties. Hence, a re-arrangement of areas was possible which met the requirements of the child welfare area in regard to medical service.

(4) NURSING SERVICE. On 31st December, 1924, the Health Visiting Staff consisted of the following:--

			0						
						Who	le-time.	P	art-time.
(a)	Nurses	undertaking	Child	Welfare,	School	and			
	Tube	erculosis work		• • •			18		2

(c)	Nurses	undertaking	Lu b er c u	ilosis work	only		5		2
					Tota	1	29		8

The duties of these nurses are defined in General Instructions, which are being revised and amended according to requirements arising from experience gained during the past few years.

A summary of work carried out by the nurses during the 12 months ended 31st December, 1924, is given in Table XXII. From the Registrar's returns it was found that 159 births (4·15) had not been notified to the County Medical Officer. Where necessary the attention of doctors or midwives concerned was drawn to the requirements of the Notification of Births Acts.

An additional whole-time Health Visitor was appointed in March, 1924, for the Rechford Rural District. As and from 1st April, 1924, a scheme was put into operation under an arrangement between the County Council and the Grays Urban District Council, for the joint appointment of Health Visitors for the district.

In the previous year's Report, reference was made to the appointment of Miss D. M. Landon as Chief Health Nurse and details of her duties for the County Council and for the Essex County Nursing Association were given.

Miss Landon commenced duty on 1st January, 1924. She has kept in close touch with the Health Visitors and her duties have enabled her to link up their work with that of the District Nurse Midwives under the Combined Nursing Scheme.

(5) CHILD WELFARE CENTRES. These have been continued by the Local Voluntary Committees who have adopted the County Council's Objects and Conditions referred to in the Annual Report for 1923. The following is a list of the Centres under this Scheme at the end of 1924:—

$\operatorname{Address}$.	Population served.	Sessions.	G	rant.	
			£	s.	d.
Progressive Club, Maldon	6,590	Weekly (Tuesday)	20	0	0

At the time of writing the question of the County Council establishing modern combined treatment centres at Brentwood, Maldon and Braintree is receiving consideration.

- (6) Provision of Milk. The two schemes for Provision of Milk (a) for districts served by Centres and (b) for districts not served by Centres was continued during the year.
- (a) Districts served by Child Welfare Centres. The following table shows the number of cases assisted by each Child Welfare Centre and the amount claimed from the County Council to meet the expenses incurred:—

Centre.		1	No. of families assisted.			Total amount p ai d County Council for year ended 31st December, 1924.

- (b) Districts not served by Centres. Under this scheme 91 mothers and 65 infants were granted supplies of milk for varying periods free of charge at a total cost of approximately £280. Dried milk was also supplied to necessitous cases at cost price.
- (7) MATERNAL MORTALITY. By Circular No. 517, dated 30th June, 1924, the Minister of Health draws the attention of Child Welfare Authorities to the report, entitled "Maternal Mortality associated with Child-bearing," written by the Senior Medical Officer for Child Welfare. Various suggestions for the prevention and remedy of the continuous high rate of maternal mortality are set out in this report and special reference is made in the above-mentioned circular to the following:—
 - (a) Ante-natal supervision.
 - (b) Maternity beds.
 - (c) Domestic, midwifery and maternity nursing.
 - (d) Investigations.
 - (e) Educational measures.

- (8) HOSPITAL TREATMENT. During the year a scheme was put into operation under which arrangements are made for the admission to hospitals of the following eases:—
 - (a) Complicated or difficult cases of confinement where hospital treatment is essential.
 - (b) Cases of confinement where, in the opinion of the medical attendant, the patient cannot with safety be confined in her own home.

In addition to the above, infants under school age who are found to be suffering from physical defects are referred to the County Medical Officer who makes arrangements for such children to be examined by the Orthopædie Surgeon, Queen's Hospital for Children, London. When treatment is recommended, the matter is referred to the Maternity and Child Welfare Sun-Committee and arrangements are made for the admission of the patients to either the Queen's Hospital for Children, or the Brookfield Orthopædic Hospital.

In all the above cases the patients or parents are required to contribute according to their financial circumstances.

(9) MATERNITY WARD, LEYTONSTONE. Reference was made last year to the proposal of the Essex County Nursing Association to erect a Maternity Ward.

After further negotiations and deliberations however, it was decided to abandon, for the time being, the question of erecting a Maternity Ward.

The chief factor in arriving at this decision was that the Essex County Nursing Association were able to make other arrangements for their nurses to receive the intern training required by the Central Midwives Board.

At the time of writing a conference with various Local Authorities near London is contemplated with a view to considering the question of providing maternity bedsfor the extra-Metropolitan area.

(10) GENERAL. Owing to limitation of space, it is impossible to give reports on the individual Child Welfare Centres this year. This will receive ample consideration in next year's Annual Report.

I am indebted to Dr. Mary D. Rankine for the following report on the general aspect of the Maternity and Child Welfare work in the County Area during the year under review:

"The necessity of dealing with children under school age, especially of the poorer classes, and also their mothers is obvious. It is not even sufficient to deal with the health of the child after birth. It is hetter to start before, and to take eare of the mother during her pregnancy.

"For this reason more Maternity and Ante-natal Clinics are needed in Essex where expectant mothers could be seen and kept under observation if possible during the whole period of pregnancy. This would not only be beneficial to the mother, but in many cases would ensure a much healthier baby.

"Such clinics should be held in connection with each Welfare Clinic, but at different hours, as it is impossible owing to lack of time for a Medical Officer to attend to two different classes at the one session.

"It would be well, too, if more Maternity Homes or Hospitals were established where mothers who were found to have any abnormality, or who might be expected to have a difficult confinement might be sent. These Homes or Hospitals would also be available in those cases where the home conditions are so unsatisfactory as to make it undesirable that the child should be born there. At present it is a very difficult matter to get accommodation for such cases, the larger hospitals being usually full, and the smaller private ones often too expensive, and few mothers care to avail themselves of Poor Law Institutions.

"Dental Clinics are urgently needed, or at least a scheme for the provision of dental treatment for Expectant and Nursing Mothers. Many of these suffer from chronic ill-health because of the effects of the septic condition of their mouths on the whole system. I am convinced from observation, that many mothers fail to nurse their babics from this condition alone.

"It should be the aim of every Centre to get in touch through the District Nurse-midwives and Health Visitors with each expectant mother in the neighbourhood who has not placed herself, probably through lack of means, etc., under the care of a private medical attendant. Normal and abnormal cases should equally be encouraged to attend regularly and a complete record of each case might thus be kept, not only after birth, but also before. Advice could also be given regarding the preparations necessary for the actual confinement and also on baby clothing, etc.

"The next step is the Child Welfare Centre, and more of these are gradually being formed and are urgently needed, especially in some of the outlying rural areas. The midwives should do all in their power to encourage their patients to attend the Welfare Centre in their district if it is within reasonable distance.

"From personal observation I think that better accommodation for these clinics is necessary at least in a good many of the present Centres.

"It is obviously not desirable to hold a Clinic in one room only. Such consultations are almost bound to be overcrowded, noisy and distracting to the Medical Officer and they certainly lack privacy both for private conversation and examination. A screen is a very poor make-shift.

"In some of our Clinics, simple health talks are given to the mothers, either by the Medical Officer or Health Visitor. Perhaps others suited for the purpose might be found to give talks on cookery, knitting and making of simple garments, etc. The mothers seem to appreciate these talks in

the Centres where they are given. At these Clinics it is possible to kee the children under school age under observation, and whenever defects at found, at least other than ordinary simple ailments, to refer the mother there own medical attendant for treatment.

- "The scheme whereby expert Orthopædic advice and treatment canow be obtained is extremely valuable.
- "Dental treatment for children under five years of age is very necessary. Enlarged glands, etc., as a result of decayed teeth are very frequent.
- "It is not an uncommon thing to examine a five years' old child i school who has hardly one sound tooth. This could have been prevented dental treatment had been available sooner.
- "Infants' Hospitals in convenient Centres are greatly to be desired for those difficult eases of Malnutrition. Everyone is familiar with those cases where babies who cannot put on weight at home, and improve a once when put under skilled care, if even for a few weeks' time only.
- "I wish also, that it were possible to have Convalescent Homes fo those children who are debilitated after measles, whooping cough, or othe common diseases of children. Often persistent ill-health and ever tuberculosis may follow from an incomplete recovery from these.
- "The scheme for the provision of milk for nursing and expectan mothers and babies has been a great boon in many cases, but the grant i not very large and sometimes one has to limit the number of cases so a to keep within the available funds.
- "At most of our clinics "Glaxo," "Ambrosia" or other dried milks are sold, and oil and malt and virol are usually stocked for sale at reduced prices
- "In several of the Centres, baby garments are on sale at reduced prices and these are much appreciated by the mothers. At Braintree some of these garments are made by the school children, and there also in one school at least, instruction in the care of babies is given to the older girls, who a intervals attend the Centre to see the work being carried on. In Braintree too, during the present year, one of the local cinemas was engaged and propaganda films of child welfare work were exhibited. This part of the work is very valuable and might well be extended. A Mother Craft Exhibition during Baby Week last year was also held and this was extremely well attended. The Child Welfare and Maternity Work is uphill, and there are still mothers who will not attend the Centres, but more and more are gradually coming to appreciate the work carried on there, and with the education of the children in the schools rapid progress should certainly be made.

"The Health Visitors and in most cases the midwives are doing their utmost to encourage the mothers to attend the Centres where available. I wish it were possible, however, to get more home visiting done. The Health Visitors do the utmost they can with the time at their disposal. I am not convinced, however, that all the District Nurse-Midwives pay as many home visits during the first and following years as is desirable; often this is impossible for them as they have too much general and midwifery work to do besides. For this reason it would be better for the work at the big Centres to have extra Health Visitors, and it is also much easier for the Medical Officer to keep in touch with them, than it is with the midwife.

"At each Centre, I have always found that the Committee and voluntary helpers are most willing to assist us in carrying on our work, and usually they do all they can to stimulate local interest, and to raise extra funds for the Centre.

"If more funds were available, and perhaps later they will be, much more might be done for the welfare of the mothers and children, and for the prevention, or early detection of disease.

"'Prevention is better than cure,' and it would be more economical in the long run to spend money on the prevention of disease, than probably to lay out a great deal more later, in the attempt to cure those ailments or defects, many of which might easily have been avoided.

"The work carried out at the various Centres in no way interferes with that of the private medical attendant. The Medical Officer in charge of the Clinic always refers the mother to her own private doctor for the treatment of any disease (other than simple ailments) which may be detected, and I have almost always found, that the local doctors are quite in sympathy with the work carried on, and some of them occasionally pay visits to our Clinics while a session is in progress.

M. D. RANKINE, M.B., ChB., D.P.H."

MIDWIVES ACTS, 1902 and 1918.

(a) PRACTISING MIDWIVES. During the year under review 278 midwives notified their intention to practise in the Administrative County. Of these, 262 were actually in practice at the end of the year 1924. These midwives are classified as follows:—

Total No. of Midwives in practice							
at end of year.							
2 62							

Dependent.
102

Bona-fide, including untrained and L.O.S. Certificated.
36
90

The total number of births which occurred during the year 1924 was 16,218 an of these, 6,417 (39.5 per cent.) were attended by midwives in the capacity of a midwife, and 2,155 (13:3 per cent.) is maternity nurses under the supervision of inedical practitioners.

Each midwife was asked to state the number of confinement cases which shattended as a midwife during the year 1924, and it was found that 114 trained and 1 untrained midwives attended 10 or less cases each; 50 trained and 5 untrained attended 11 - 20 cases each; 30 trained and 5 untrained attended 21—40 cases each 16 trained and 2 untrained, 41—60 cases each; 9 trained and 3 untrained, 61—10 cases each, and 7 trained and 3 untrained midwives attended over 100 cases each.

In 17 instances reports were received from Health Visitors and others regarding cases of confinement attended by women, who were not certified, acting as midwive without being under the direct supervision of a doctor. Letters of warning were sent to such women acting as midwives and the Health Visitors kept them unde observation. In no case, however, was it found necessary to institute legal proceedings.

The following extract from a Notice dated June 1923, issued to Registere Medical Practitioners by the General Medical Council is of interest:—

"Association with Uncertified Women practising as Midwives. It is provided in the Midwives Act, 1902, the Midwives (Scotland) Act, 1915, and the Midwives (Ireland Act, 1918, respectively, that 'no woman shall habitually and for gain attend women in childbirth otherwise than under the direction of a qualified medical practitione unless she be certified under this Act.'

"And whereas it has been made to appear to the Council that certain registere medical practitioners have from time to time, by their countenance or assistance oby issuing certificates, notifications, or other documents of a kindred characte knowingly enabled uncertified women, on pretence that such women were under their direction, to attend women in childbirth, contrary to law.

"And whereas such conduct is in the opinion of the Council discreditable to the profession of medicine, and calculated to defeat the purpose of the Statutes made in the public interest for the protection of mothers and infants;

"Notice is hereby given that any registered practitioner who is proved to have softended will be liable to have his named erased from the Medical Register."

(b) Notifications. The following list shows the number of notification received from Certified Midwives in accordance with the rules of the Central Midwive Board during the year as compared with the previous four years:—

		1920	1921	1922	1923	15	12.
Records of Medical Aid.		1090	 1083	 1030	1025	 1.	14

	1920	1921	1922	1923	1924
Artificial Feeding	63	39	35	43	51
Liability to be a Source of Infection	31	46	41	37	58
Laying-out for Burial	95	102	129	181	180
Ophthalmia Neonatorum*or Discharging					
Eyes	85	99	84	71	62

*In accordance with the revised Rule E. 22 (1) (b) a certified midwife when acting as a midwife must, on and after 1st January, 1924, notify the death of a patient whether a doctor is in attendance at the time of death or not. Hence the increased number as compared with previous years.

The 1144 cases (17.8 per cent.) where midwives sought the assistance of doctors were for various reasons, namely:—

Albuminuria		6	cases,	Placenta Adherent	 -66 d	cases.
Dangerous Feebleness	of			Placenta Prævia	 9	, ,
lnfant		63	, ,	Premature Birth	 50	,,
Eclampsia		4	,,	Prolonged Labour	 217	13
Hæmorrhage:-	•			Presentation (abnormal)	 71	,,
Ante-partum		30	,,	Pyrexia (High Temp.)	 51	,,
Post-partum	,	30	, ,	Rigid Os	 6) 1
Instrumental Assistance		3	3 7	Ruptured Perineum	 202	'1
Malformation of Child		3	,,	Spina Bifida	 2	,,
Miscarriage, Abortion		38	,,	Still-birth	 6	,
Miscellaneous Causes		197	7 9	Uterine Inertia	 24	,,
Ophthalmia Neonatorun	n or					
Discharging Eyes		66	, 7			

Puerperal Fever and Ophthalmia Neonatorum.

Special investigations were made into all cases of high temperature of mother and discharging eyes of infant in a midwife's practice.

The results of these investigations showed that during 1924, in eight cases of High Temperature and five cases of Discharging Eyes, the midwives concerned had not properly carried out the rules of the Central Midwives' Board. In three cases the midwives were interviewed by the Chairman and Members of the Maternity and Child Welfare Sub-Committee and reprimanded. In four other instances the midwives were interviewed by the County Medical Officer and cautioned. Letters of caution were sent to the remainder.

Visits.

Seven hundred and eighty (780) routine visits were made to midwives during the year and of these 575 were undertaken by Assistant County Medical Officers and 205 by the Chief Health Nurse.

In addition to those referred to under the previous heading, five midwives were interviewed by the Chairman and Members of the Maternity and Child Welfare Sub-Committee. One midwife was reported to the Central Midwives Board and her name removed from the Roll as the charges were proved against her in regard to her conduct in the case of death of Infant. She had on a previous occasion been interviewed and cautioned for a similar offence.

Two of the other midwives concerning whom the Coroner had made complaints regarding their conduct were interviewed, and in one case reported to the Board. Both these midwives, however, subsequently sold their practices and left the County.

The remaining two cases were investigated on account of death of mother and death of infant respectively and the midwives were severely reprimanded by the Committee.

Doctors' Fees.

In accordance with the Midwives Act, 1918, during the year ended 31st December, 1924, the County Council paid the sum of £999 2s. 9d. as fees to medical practitioners and recovered from patients during the year the sum of £204 18s. 5d.

The following comparative table is of interest, shewing (a) the number of medical aid notices received from midwives during the past five years and (b) the corresponding number of doctors' claims made against the County Council in respect of such notices. This table shows that the number of claims is steadily increasing:—

Year.	No. of medical aid notices received from midwives.		for	of medical aid no which doctors' ela ave been received	Total amounts of claims.				
						£	s.	d.	
1920	* * *	1,090		382	• • •	549	9	1

1923		1,025		585	• • •	829	19	3	
1924		1,144		592	• • •	999	2	9	

Lectures to Midwives.

An excellent syllabus of lectures was again arranged under the auspices of the Essex Midwives' Association, of which the County Medical Officer is President, the midwives being invited to the following Centres, at each of which six lectures were given during the winter months:—Chelmsford, Romford, Colchester, Leytonstone, Saffron Walden and Southend-on-Sea.

Essex County Nursing Association.

(a) General. For the four quarters of the year 1924 the following grants were paid by the County Council to the County Nursing Association in accordance with the Agreement:—

	£	g.	d.
• • •	742	0	0
• • •	50	0	0
	4,471	17	9
	75	0	0
	220	0	0
	0 = = = =	-1 100	
	£5,558	17	9
		742 50 4,471 75 220	£ s 742 0 50 0 4,471 17 75 0 220 0 £5,558 17

The Agreement between the County Council and the Essex County Nursing Association continued to operate during the year. By arrangement, however, this Agreement terminated on 31st March, 1925, and a new Agreement has been drawn up incorporating the alterations set out below, with effect from 1st April, 1925, and subject to the approval of the Ministry of Health:—

- (1) The Agreement to remain in force for a period of one year certain from 1st April 1925, and thereafter to be determinable by three calendar months' notice in writing on either side on 31st March in any year.
- (2) The Grant of £40 for establishing a Nurse-midwife in any district approved to be increased to £60. Also this Grant is not to be paid oftener than once in three years for a new nurse sent to a district already provided under this scheme except in cases of death, chronic illness, marriage, or other reasonable cause. The old Agreement specified once in five years. The grant to be extended to cover the cost of the training each year of not exceeding one of the emergency Nurse-midwives.
- (3) The Association to retain an additional emergency Nurse-midwife for septic cases.
- (4) The annual grant towards the cost of the maintenance of emergency Midwives to be increased from £50 to £200, the number of emergency Midwives being increased from two to three, as required by para. 3.
- (5) The formation of new District Associations to be subject to the approval of the County Council and the Ministry of Health. The words "up to the number of five per annum" to be deleted.
- (6) The clause to the effect that particulars of a deficit in any financial year to be submitted to the County Council to be deleted.
- (7) An additional clause asking the Association to submit to the Council early in each year an estimate of their income and expenditure for the ensuing financial year to be made.

(8) A clause to be inserted providing that in the event of the Association being called upon by the County Council, as a result of legislation or by reason of the requirement of a Government Department to perform additional services, the terms of the proposed agreement to be subject to reconsideration.

Owing to the variations in the proposed new agreement it is estimated that the payments by the County Council to the Essex County Nursing Association will be increased by £1275 per annum.

By circular 559, dated 27th February, 1925, the Ministry of Health indicated that as and from 1st April, 1925, grants for the training and supply of Midwives will be made by the Ministry instead of the Board of Education.

The Ministry are prepared "to approve of contributions being made by a County Council to the County Nursing Association in respect of the provision of trained Midwives for service in the area of the Council. These contributions will rank for the Exchequer grant of 50 per cent., under the Maternity and Child Welfare regulations, but the grant will not normally exceed £8 10s. for any Midwife appointed in 1925-26 or 1926-27, and £15 for any Midwife appointed in subsequent years."

Grants will also be made to Institutions approved by the Central Midwives' Board and the Ministry of Health for each student trained as a midwife. Hence it is hoped that the Essex County Nursing Association will be able to claim a grant of £20 for each pupil who completes a course of less than 12 months' duration approved under the new Regulations of the Ministry of Health.

(b) DISTRICT NURSING ASSOCIATIONS. At the end of 1924 the number of District Nursing Associations in the Administrative County which were affiliated to the County Nursing Association and which employed 149 Nurses, was as follows:—

No. of affiliated D.N. Associations.	1	No. undertaking Midwifery and District Nursing.	No. performing District Nursing duties only.
135		122	 13

Associations during the years 1922, 1923 and 1924 is given below:—

74:7:r		1922		1923		1924,

Of the 135 affiliated Associations, 124 participate in the County Council's Combined Nursing Scheme.

(c) Parishes Served:-

Number in the County (excluding extra-Met	ropolitan Area)	377
Number served by affiliated District Nursing	g Associations	270
Number still to be provided for		107

As anticipated, the appointment of the Chief Health Nurse who commenced duty on 1st January. 1924, has been conducive to a more comprehensive knowledge of the duties, under the Combined Nursing Scheme, of both Health Visitors and District Nurse-Midwives. The following report, made by the Chief Health Nurse, indicates some of the work undertaken by her during the year:—

"For the purpose of this report I refer to the duties carried out under the following headings: --

- 1. Inspection of midwives.
- 2. Health Visitors.
- 3. District Nurse-Midwives and the Combined Nursing Scheme.
- "In many cases one visit has fulfilled a two-fold object.
- "1. Inspection of Midwives. Routine Inspections, 205; Special Investigations, 20.
 - "Of the special investigations the most serious were as follows:-
 - "(a) Deaths. The deaths of two mothers suffering from puerperal sepsis occurred, attended by Midwife E. E. As far as I could ascertain, the midwife had been careful in every respect except in omitting to remove her wedding ring during attendance on these cases. She was interviewed by the County Medical Officer thereon.
 - "The death of a premature infant occurred in the practice of Midwife W. R. The midwife did not appear to realise the special care needed for such children, or the importance of her rules as to the summoning of medical aid. Since then a similar case occurred in this midwife's practice and she was struck off the Midwives Roll.
 - "(b) Pemphigus. The midwife had not previously seen such a case, and quite forgot her rules regarding same.
 - "(c) General. Most of the midwives are hard working and conscientious, having the welfare of their patients at heart. It is difficult, however, to make them realise that medical aid must be sent for at once at the first sign of inflammation of the eyes. The three reasons which contribute to this difficulty are—

"(i) there is an idea that a notification is a disgrace in the eyes of the Local Supervising Authority (ii) the doctor often laughs at the midwife for being fussy when the discharge is very slight and (iii) the parents object to a doctor's fee when they can see no apparent need.

"2. Health Visitors. 92 visits paid.

- "(a) General remarks. In some areas, notably Epping, Billericay, Rochford, Maldon and Bumpstead, the work has suffered considerably owing to the constant changes of health visitors.
- "One of the causes of dissatisfaction is the large areas which have to be covered. All the rural health visitors find the cycling especially during the bad winter months, very trying.
- "Judging by my own observations the physical strain on all but the strongest is too great, and a short holiday during the winter would do much to conserve zeal and health.
- "I may say that the health visitors, though varying greatly in ability, are hard working and conscientious.
- "(b) School Nursing. (i) Clinics. As these are directly under the School Medical Inspector, I have not seen much of this work. In the Dunmow and Braintree areas the health visitors express great. regret that no Dental Clinics are held.
- "(ii) General. The standard of cleanliness is steadily improving in the schools, but frequent changes of staff have done much to retard progress in some areas. Though, undoubtedly, the least pleasant of the school nurse's duties are those dealing with dirty children, they are in most cases conscientiously carried out.
- "Where there is persistent lack of cleanliness, I have noted there is often lack of co-operation from the Head Teacher, due generally to fear of unpopularity with the parents or failure to regard cleanliness as part of education.
- "(c) Tuberculosis. This is most satisfactorily done in areas where the nurse has a dispensary, and is in constant touch with the Tuberculosis Officer.
- "It is difficult and sometimes impossible for patients in distant country areas to attend the dispensary. I am constantly urging those health visitors who have no dispensary, to visit the one at which their patients attend at regular intervals in order to receive instructions from, and report on their visits to, the Tuberculosis Officer.

- "(d) Maternity and Child Welfare. This is probably the branch of work most appreciated by the parents. The health visitors are all interested in this work, but unfortunately in the large scattered areas where there is no District Nurse-midwife the visiting cannot be done as frequently as is desirable.
- "I have not visited many of the Infant Welfare Centres, but from what I have seen and heard their educational usefulness appears to be steadily increasing. Where the premises are suitable and the Committee run the Centre in a business-like way, with no suggestion of charity, the mothers thoroughly appreciate the Welfare Centres.
- "(e) Co-operation between Health Visitors and District Nursemidwives. With very few exceptions, the Health Visitors are on good terms with their District Nurse-midwives though the latter are not always used as much as they might be. Where difficulties arise it is usually with the older midwives in the larger places. They feel that they already have plenty to do with their nursing duties and are a little jealous of the status, salary and holidays of the Health Visitors.
- "The latter are sometimes inclined to not only feel, but show, their superiority in training. In the past year I am sure there is steady improvement, though I am inclined to doubt that the combined scheme will ever be as satisfactory in the towns as it is in the country areas.
- "3. DISTRICT NURSE-MIDWIVES AND COMBINED NURSING SCHEME. Visits paid, 224.
 - (a) I feel that the usefulness of the District Nurse-midwives as regards public health duties varies considerably, depending largely on the personality and initiative of the individual. Nearly all fail to recognise the full importance of preventative work, but most of the younger nurses now come from the training home anxious to help, thanks to the introduction they now get into school nursing, tuberculosis and child welfare work at Leytonstone.
 - "(b) School Work. In some cases the District Nurse-midwives do not make sufficient effort to attend at least a part of the medical inspection in order to receive instruction from the School Medical Inspector, and give this Officer information about home conditions, etc. Where they have been asked to do home visiting it has generally been satisfactorily done.
 - "(c) Tuberculosis Nursing. At present none of the District Nursemidwives have assisted at dispensary work. Nursing duties have been

satisfactorily carried out, but I think the District Nurse-midwife could do much in educating the people in preventive measures. Dr. Sorley's lectures at the Training Home, Leytonstone, will do much to forward this.

- "(d) Maternity and Child Welfare This is undoubtedly the most popular branch of public health dutics with the District Nurse-midwives. They appreciate the importance of the work and in very many cases supervise the infants in their areas very well.
- "In nearly all places where a clinic is held they attend regularly and assist the Health Visitor satisfactorily.
- "(e) District Nursing. In seeing the practical work of the nurses, I have felt that the standard of work taught at Leytonstone must be avery high one to achieve so good a result in so short a time."

1). M. Landon, Chief Health Nurse.
